

LoveTap — Client Account Setup Guide

How to set up an account for a client (worker) from start to finish — about 5 minutes each.

Two sides to every account: 1) **Admin Dashboard** (web — you create the account & assign a chip) • 2) **Mobile App** (the client logs in, connects Square & bank).

Part 1 — Create the account (Admin Dashboard)

Dashboard: `sthfinancial.vercel.app/login`

1. Log in to the dashboard.
2. Go to **Customers** → click + **Add Customer**.
3. Enter **Full Name, Email, Phone, Password** (set a temporary one).
4. Click **Save**, then share the login with the client.

Or: the client can self-register in the app via **Sign Up** — they then appear automatically in your Customers list.

Part 2 — Assign an NFC chip

1. Go to **NFC Chips** → + **Add Chip**.
2. Enter the **Chip UID** (printed on the chip).
3. Select the **Customer** from the dropdown.
4. Click **Save** — tips paid via that chip now credit the client.

Part 3 — Client finishes in the Mobile App

App: **LoveTap**

1. **Log in** with the email + password (or **Forgot Password** to reset).
2. **Connect Square** (Profile → Connect Square) — sign in to Square & approve. Shows **Connected**.
3. **Connect bank account** (Profile → Bank Account) — status goes Pending → **Connected**.

Setup is complete when **both** Square and bank show **Connected**.

Part 4 — Test & payouts

- Tap the client's chip with another phone → pay a test tip → confirm it shows in **Transactions**.
- Client requests payouts in the app; you process them in dashboard **Payouts**.

Per-client checklist

- ☐ Account created in **Customers**
- ☐ Login shared
- ☐ NFC chip assigned
- ☐ Client logged in & changed password
- ☐ Square **Connected**
- ☐ Bank **Connected**
- ☐ Test tip done

Troubleshooting

"Email already registered"	Account exists — search Customers instead of recreating.
"Chip UID already registered"	Chip is already in the system — find it under NFC Chips and reassign.
Bank stuck on Pending	Client didn't finish approval — retry Connect in Profile.
Client can't log in	Confirm the email; use Forgot Password to reset.
Chip tap opens nothing	Chip isn't assigned to a customer — re-check in NFC Chips .

Admin creates account → Admin assigns NFC chip → Client logs in & connects Square + bank → Tipper taps chip & pays → Client requests payout → Admin processes payout
