

ADMIN GUIDE

LoveTap.Me

Run the platform from the admin panel at adminpanel.lovetap.me.

Sign in at **adminpanel.lovetap.me** with your admin email and password. Workers use app.lovetap.me; customers tip on app.lovetap.me/t/... — you don't need those to run the business.

Dashboard

- Total tips, active workers, and fees collected, with recent activity.

NFC Chips — create & control codes

- 1 **Generate Batch** → choose a quantity → downloads a **CSV** with each 6-character code (LT-XXXXXX) and its **tap_url** (app.lovetap.me/t/LT-XXXXXX).
 - 2 Program each pendant with its tap_url and **lock it read-only** so it can't be changed.
 - 3 Re-download any batch CSV anytime.
- **Register a custom code** — create a vanity code (e.g. LT-JENNY) for a single chip. Note: custom codes are guessable — use random batch codes for sealed retail pendants.
 - **Tap URL** column — click to copy any pendant's URL.
 - **Link / Unlink** — assign a chip to a worker or reassign it (the code never changes and the original worker keeps their past tips).
 - Disable / delete, filter by status, and see Total / Active / Assigned counts.

Customers, Transactions, Payouts

- **Customers** — add a worker (optionally with a chip code), view their tips/chips/Square status, activate or deactivate.
- **Transactions** — every tip across all workers, including *refunded* and *disputed* statuses.
- **Payouts** — **view and reconcile** Square payout status (sent / paid / failed). Square pays workers directly — LoveTap does not process payouts.

Fees

- Set your **platform fee** (your cut). The customer covers all fees so the worker nets the exact displayed tip; your platform fee is collected to your own Square account.

Before going live

- Switch Square from test to production so real cards work.
- Confirm app.lovetap.me and adminpanel.lovetap.me are serving the latest deploy.
- Program one test pendant and run a real tip end-to-end.
