

LoveTap.Me

User Guide

Getting tipped, and sending a tip — no cash needed.

LoveTap lets customers tip you by tapping their phone on a small NFC chip. This guide covers both sides — receiving tips, and sending one.

Part 1 · Receiving Tips (Staff)

Set up your account

- 1 Open the LoveTap app and tap **Sign Up**. Enter your name, email, phone, and a password.
- 2 After signing up, the app shows your personal **chip code** — this is already linked to you.
- 3 Tap **Connect Square** and approve the secure Square sign-in. This is where your tips are deposited.

No tips will arrive until Square is connected. Square deposits your money to your bank on its normal schedule — LoveTap never holds it.

Track your money

- **Dashboard** — total tips, stats, and a tips-over-time chart.
- **Transactions** — every tip you've received. Filter by status.
- **Payouts** — your available balance and deposits.
- **Profile** — update your details, change your password, or log out.

Part 2 · Sending a Tip (Customers)

Customers need **no app and no account**. Two ways to tip:

The easy way — tap and pay in the browser

- 1 Tap the phone on the chip — it opens `lovetap.me/t/...` in the browser.
- 2 The staff member's name appears — pick a tip amount (or enter your own).
- 3 Review the total (tip + small fee) and pay with your card on the secure Square screen.
- 4 See **Thank you!** — the tip goes straight to the staff member. Done in ~15 seconds.

In the app

- If you have the LoveTap app, tap the chip (or enter the code by hand) on the home screen, then pick an amount and pay — same flow, same result.

The tipper pays a small processing fee on top, so the staff member receives the **full** tip. Card details go straight to Square — LoveTap never sees your card number.
