

ADMIN GUIDE · WEB PANEL

LoveTap.Me

Everything you run from the web admin panel, with the flow for each.

The admin panel is a **web dashboard** (separate from the mobile app). Sign in at <https://lovetap.me> with your admin email and password. It has seven sections: Dashboard, Customers, Transactions, Payouts, NFC Chips, Fees, and Settings.

Dashboard

- At-a-glance totals: **Total Tips**, **Active Customers**, and **Fees Collected**.
- A **Recent Transactions** list of live activity.

NFC Chips — create and control the chips

Generate & program

- 1 **Generate Batch** → choose a quantity (up to 5,000) → a **CSV** downloads.
- 2 The CSV's **tap_url** column (<https://lovetap.me/t/LT-XXXX-XXXX>) is what you program onto each chip.
- 3 Program the tags, then **lock them read-only** so the URL can't be changed.
- 4 Re-download any batch's CSV anytime from **Code Batches**.

Manage chips

- **Tap URL** column — each chip's live URL; click to copy one.
- **Register Chip** (add one by code), **Link / Unlink** a chip to a worker, **Disable / Delete**.
- Filter by *unassigned / assigned / active / disabled*; stats show *Total / Active / Assigned*.

Customers (your workers)

- **Add Customer** — name, email, phone, password. The **Chip Code** field is optional: enter a code from a batch to assign it, or leave blank to auto-generate.
- Open a customer to see their tips, payouts, chip, and bank status.
- **Change code** — swap them to a different batch code; the old chip is released back to the pool.
- **Activate / Deactivate** or **Delete** from the row menu.

Workers can also self-register in the mobile app — a chip code is auto-generated and linked on sign-up, and they appear here automatically.

Fees — and your cut

- **Processing Fee** (percentage + flat) — what the **tipper** pays on top of the tip. Set it to cover Square's processing so the worker keeps the full tip.
- **Platform Fee — your cut** — your own revenue, taken from each payment into **your** Square account (Square's application fee). It comes out of the processing fee, so it is **not** added on top for the tipper. (65 bps = 0.65%.) 0 = collect nothing.
- The **Tipper Preview** updates live; click **Save Changes** to apply.

Transactions & Payouts

- **Transactions** — every tip across all workers (Reference ID, Customer, Tip, Total, Status, Date). Search, view details, copy reference ID.

- **Payouts** — Worker, Amount, Destination, Status. **Process** a pending payout or **Retry** a failed one. Most movement is automatic — tips settle directly to each worker's Square.

Settings

- Update your admin **Profile** and **Email Notification** preferences.

Before going live

- Confirm **lovetap.me** DNS points at the app before programming chips (they lock read-only).
- Switch **Square from test to production** so real cards work.
- Change the default admin password.
- Program one test chip and run a real tip end-to-end.
