

WEB TIP PAGE · TAP TO PAY

LoveTap.Me

What happens when a customer taps a chip — the no-app browser payment flow.

Every LoveTap chip is programmed with a unique web address. When a customer taps it, their phone opens that page in the browser — **no app and no account needed**. This is the page tippers actually pay on.

The chip URL

- Each chip carries its own URL: `https://lovetap.me/t/LT-XXXX-XXXX`.
- The code identifies which worker gets paid — the page looks up their connected Square account.
- You get these URLs from the admin panel (NFC Chips → Tap URL column, or the batch CSV).

The tipper's flow — step by step

- 1 **Tap** the chip with any phone — the browser opens the worker's tip page.
- 2 The page shows **who they're tipping** (the worker's name).
- 3 Pick a preset — **\$5 / \$10 / \$20 / \$50** — or enter a custom amount.
- 4 Review the breakdown: **Tip + Processing fee = You pay**. The fee is paid by the tipper, so the worker receives the full tip.
- 5 Enter card details on the secure **Square** card form and confirm.
- 6 See **Thank you!** — the tip settles into the worker's Square account. Done in about 15 seconds.

Security & money flow

- Card details are entered on **Square's** Web Payments form and tokenized in the browser — LoveTap's servers never see or store card numbers.
- Payment is created with the worker's Square authorization: the tip lands in **their** Square balance, and LoveTap's platform fee (the application fee) goes to the **LoveTap** Square account.
- Square deducts its processing cost first, then routes the application fee — all automatically.

Good to know

- **No app required** — it works in any phone's browser, iPhone or Android.
- If a chip isn't linked to anyone yet, the page shows a friendly **"This chip isn't active"** message instead of taking a payment.
- The same payment flow is available inside the LoveTap app for anyone who has it (tap the chip or enter the code on the home screen).

Hold the top of the phone flat against the chip for a second until it reads. The fee is always shown before paying, so the total is clear up front.
